

PROJECT SUMMARY

Project No. _____

McVay Hwy: Franklin Blvd to City Limits

Project Visual:

Project Description:

Franklin Boulevard (Hwy 225) is a primary north-south connection between I-5 and Franklin Blvd. (Hwy 126). Franklin Blvd. (Hwy 225) also connects with Lane Community College and I-5. The City has embarked on this project that will improve connections; provide bike, pedestrian, and storm water facilities, provide a safer facility for all modes, and help make the Glenwood area a vibrant place to live, work, and visit.

To begin this project, a design concept will be developed identifying the right-of-way width, various elements such as bicycle, pedestrian, and stormwater needs, intersection layout and right-of-way envelope, and potential re-alignment of an intersecting street. Once the envelope has been established, the environmental (NEPA) analysis would be completed for the corridor.

This initial step will provide certainty to development along the corridor as development has already begun on various properties along the corridor, Union Pacific for their rail crossing, and utility providers so that public services can be provided in an efficient and cost-effective manner. The larger project will help further implement the Glenwood Refinement Plan and support the City of Springfield’s economic development and transportation safety priorities.

Project Quick Facts

Location	Franklin Blvd (Hwy 225) (locally referred to as McVay Hwy)		
Project Limits	Franklin Blvd (Hwy 126) to City Limits		
Length in feet	8000 ft		
Functional Class	Minor arterial	Estimated Project Cost	
5-year Crash History	1 fatal, 6 moderate, 23 minor, 20 property damage only	STBG Funds Requested	\$435,945
Bike/Ped Volumes (yr)	Not available	TA Funds Requested	\$
Traffic Volume (yr)	13,000 (2011), 16,000 (2020)	CMAQ Funds Requested	\$
Transit Ridership	300 passengers/day (2019: Route 85)	Local Funding	\$364,055
Completion/Purchase Year	2022	Total Project Cost	\$800,000
