

**Eugene-Springfield Metropolitan Area
Residential Lands and Housing Study
Draft Site Inventory Document**

1999

Acknowledgments

This study was conducted by an intergovernmental staff team with project management by the Lane Council of Governments. The team included representatives from the cities of Eugene and Springfield, Lane County, and the Lane Council of Governments (LCOG). This draft report was prepared by LCOG and serves as a 1995 update to the 1991 Residential Land Site Inventory.

Members of the project team included:

Jim Croteau, Principal Planner, City of Eugene

Richie Weinman, Housing and Neighborhood Development Manager, City of Eugene

Robin Johnson, Housing Planner, City of Springfield

Roy Burns, Intergovernmental Relations Coordinator, Lane County

Clair Van Bloem, Senior Research Analyst, Lane Council of Governments

Carol Heinkel, Senior Planner, Lane Council of Governments

Sandra Belson, Assistant Planner, Lane Council of Governments

Karen Tarnow, Assistant Planner, Lane Council of Governments

Jeff Krueger, Associate Planner, Lane Council of Governments

Preparation of this report was financed through grant funds to the Lane Council of Governments from the Oregon Department of Land Conservation and Development.

Errata Sheet

The April 1997, Draft Site Inventory Document presents information on all whole or partial undeveloped tax lots, residentially zoned or designated low-density, of ten acres and greater, or medium- and high-density of one acre or more as of January 1995. During the Eugene, Springfield and Lane County Planning Commission review, modifications were made to the definition of unbuildable land. Below is the revised definition.

Unbuildable

- Floodway;
- In Eugene = Protected wetlands, wetland mitigation sites and other significant wetlands;
- In Springfield = Wetlands larger than 0.25 acres;
- Land within easement of 230 KV powerlines;
- Land within 75 feet of Class A stream or pond;
- Land within 50 feet of Class B stream or pond; and
- Small, irregular lots were also subtracted from the total buildable land supply during the adjustment to the land supply.

In addition, floodplain land in the Springfield UGB and one-third of the total buildable wetlands in the Eugene UGB received no housing allocation.

Appendix B Site Inventory Characteristics	

Introduction

This document contains the detailed characteristics of the Residential Land Site Inventory conducted for the 1995 Residential Land and Housing Study. This report addresses the requirement of Statewide Planning Goal 10, Housing, and its administrative rule for an inventory of buildable lands for residential use. Preparation of this report was financed through Periodic Review and Technical Assistance grant funds from the Oregon Department of Land Conservation and Development.

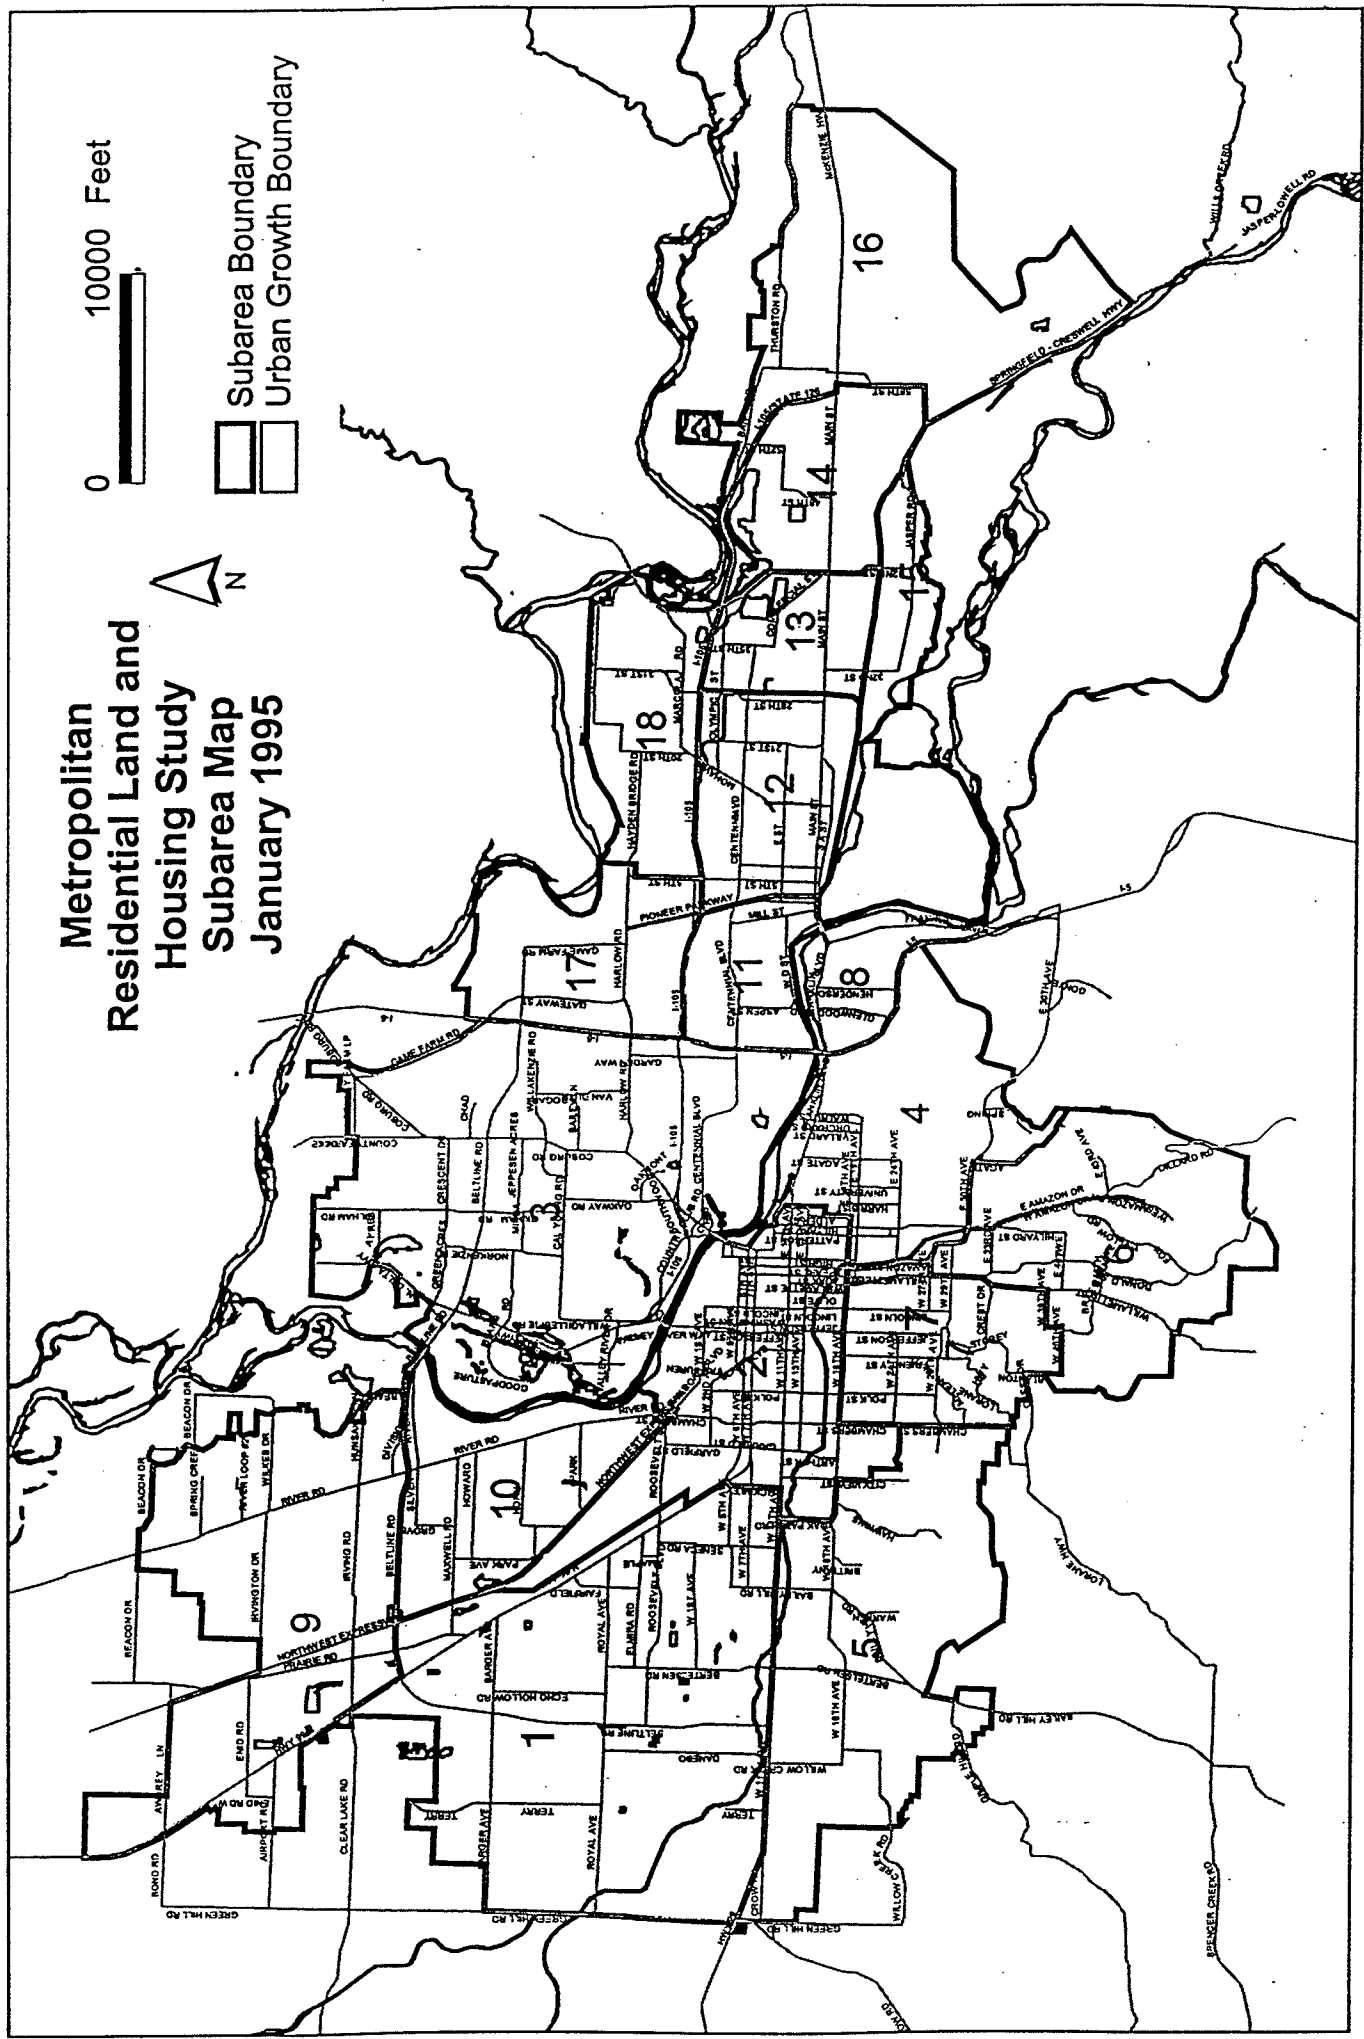

To provide a more complete and accurate picture of the residential land supply in the Eugene-Springfield urban growth boundary (UGB) an inventory of the larger residential sites was conducted. For this analysis, the Eugene-Springfield UGB was divided into 18 subareas that could be aggregated into the Eugene UGB area and the Springfield UGB area. Maps of each subarea follow the Site Inventory Methodology.

Included in the site inventory were all whole or partial undeveloped tax lots residentially zoned or designated low density of ten acres and greater or medium and high density of an acre or more. Based on the results of the supply analysis, the site inventory included approximately 62 percent of the buildable residential land.

Metropolitan Residential Land and Housing Study Subarea Map January 1995

 Subarea Boundary
 Urban Growth Boundary

Methodology

The site inventory is being updated to January 1, 1995 and is basically an update of the 1990 site inventory, which was conducted for the 1991 Supply and Demand Analysis. A site is defined as contiguous parcels with the same ownership and plan designation. To update the inventory, all whole or partial tax lots in vacant, agricultural, or timber use residentially zoned or designated low density of ten acres and greater or medium and high density of an acre or more were selected from the July 1, 1992 Metro Parcel File. This selected group of parcels was matched to the 1990 site inventory and lists were made of discrepancies between the two files. These lists were reviewed and parcels were either added, subtracted, or modified on both paper copies and maps of 18 subregions within the Eugene-Springfield UGB.

Planners from the cities of Eugene and Springfield reviewed the site information on the maps indicating any development or final subdivision approval as of January 1, 1995. Changes were noted on the maps and the site inventory was adjusted accordingly. In addition, each site was overlaid over aerial photos taken December 1995 to identify development on the sites. After all modifications were made, the sites were digitized and entered into an ACCESS data base from which queries could be conducted.

As part of the supply analysis, unbuildable land was identified and subtracted from the supply. Unbuildable land included the following:

- Floodway
- Wetlands:
 - In Eugene = Protected wetlands and wetland mitigation sites in the West Eugene Wetlands Special Area Study and other significant wetlands in the National Wetlands Inventory
 - In Springfield = wetlands identified in the Springfield Wetlands Inventory that are over 0.25 acres.
- Land within easement of 230 KV powerlines
- Land within 75 feet of Class A Stream or pond
- Land within 50 feet of Class B Stream or Pond

To determine unbuildable land, polygon overlay analysis was conducted. The information for each site was entered into the ACCESS data base.

Definitions and sources of information used to complete the residential site inventory are listed below.

Site Number

The number to the left of the dash indicates the subarea, while the number to the right is the unique site identifier. There are in some cases gaps in the numbering series where sites in the 1990 inventory were developed and dropped from the 1995 inventory.

Site

Contiguous parcels within the same plan designation that are under a single ownership.
(Source: Tax assessor's maps and files, 1992 Metropolitan Parcel file.)

Contiguous

Adjacent parcels not separated by a street, railroad, or drainageway.

(Source: Tax assessor's maps, 1992 Metropolitan Parcel file.)

Generalize Plan Designation

For the purposes of this study, a generalized plan designation was developed based on the Metro Plan designation, refinement plans and/or zoning. *L* is low-density residential; *M* is medium density, *H* is high-density residential, and *X* is mixed use.

Plan Use

This field identifies the planned use of the land based on Metro plan designations and the result of refinement plans. Below is a list of the Metro Plan designation codes.

- A Agriculture
- B Booth Kelly Mixed Use
- C Community Commercial
- D Commercial Mixed Use
- E Education
- F Forest
- G Sand and Gravel
- H High-Density Residential
- I Light-Medium Industrial
- J Rural Industrial
- L Low-Density Residential
- M Medium-Density Residential
- N Natural Resources
- O Campus Industrial
- P Park and Open Space
- Q Rural Commercial
- R Rural
- S High-Density Mixed Use
- T Ag/Airport Reserve
- U Medium-Density Mixed Use
- V University Research
- X Government
- Y Special Heavy Industrial
- Z Heavy Industrial
- & Commercial/Lt. Medium Industrial Mixed Use
- # Commercial/Medium-Density Residential Mixed Use
- 1 Major Retail Center
- 2 Lt Medium Industrial/Community Commercial Mixed Use
- 3 Community Commercial/Medium-Density Residential/ High-Density Residential/Light-Medium Industrial Mixed Use
- 4 Community Commercial/Medium-Density Residential/High-Density Residential Mixed Use
- 5 High-Density Residential/Community Commercial Mixed Use

Plan Use

- 6 High-Density Residential/Community Commercial/ Lt. Medium Industrial Mixed Use
- 7 Downtown Mixed Use

City Status

This field indicates whether the site is in Eugene (EUG), Springfield (SPR), or the Unincorporated area (Unincorporated).

Constrained

This field displays the number of acres of buildable land that is affected by one or more of the following constraints:

- Wetland
 - In Eugene = wetlands in the West Eugene Wetlands Special Area Study that are not protected or mitigation sites and any wetlands in the National Wetlands Inventory not considered unbuildable.
 - In Springfield = wetlands in the Springfield Wetland Inventory that are .25 acres and under in size.
- Floodplain = Defined by Federal Emergency Management Administrations on maps
- Hydric Soils = soils considered hydric in the 1992 Natural Resource Conservation Service Soil Survey.

A *yes* next to one or more of the above constraints indicates which constraint is present.

Service Delay

Displayed in this field is the number of years city staff estimated it would take to provide services to the site.

Slope > 25%

This field indicates the number of buildable acres affected by slopes over 25 percent. This information was developed by overlaying 7 ½-minute digital elevation model data provided by Peerless Management Systems over the buildable land supply.

Total Acres

Number of undeveloped, residential acres within the UGB. In cases where a parcel greater than one acre was occupied by one single-family residence, only a portion of that parcel was considered developed by the residence. The remainder was considered undeveloped and was included in the inventory. (Source: 1992 Metropolitan Parcel File, Tax assessor's Files; January 1995 aerial photos.)

Unbuildable Acres

The criteria used regarding unbuildable acres included:

- Floodway

- Wetlands:
 - In Eugene = Protected wetlands and wetland mitigation sites
 - In Springfield = Wetlands identified in National Wetlands Inventory that are over 0.25 acres.
- Land within easement of 230 KV powerlines
- Land within 75 feet of Class A Stream or pond
- Land within 50 feet of Class B Stream or Pond

Floodway

Defined by Federal Emergency Management Administrations on maps.

Wetland

In general, protected wetlands and wetland mitigation sites were considered unbuildable. Different data sources were used for different parts of the Metropolitan area. Wetlands in west Eugene were already identified by the West Eugene Wetlands Special Area Study.

The only existing wetland data for the part of Eugene that is outside the west Eugene area is from the National Wetlands Inventory. Staff met and evaluated this inventory by looking at influencing factors: the wetland type, if it was connected to a larger water system, if it was in a residential area, the level of disturbance, and the amount of vegetative cover.

Springfield does not currently have designations such as protected wetland and mitigation sites. Springfield considered wetlands larger than 0.25 acres to be unbuildable. Even if a wetland was not designated as *protected*, development of the wetland would require mitigation at a ratio of at least 1:1 and would be associated with the same wetland or the same general area. This means that an equal number of acres would be removed from the inventory.

Powerlines

The easement around 230 kilo volts or greater powerlines were considered unbuildable. The Bonneville Power Association owns all the major powerlines in the metropolitan area and has digitized the lines and estimated the average easements.

Streams

Two types of riparian zones were considered unbuildable in this study: *A* perennial, Floodway and *B* perennial, no Floodway. The waterside setback for Class A streams and ponds is 75 feet. The setback for Class B streams and ponds is 50 feet. These setbacks were determined by surveying other jurisdictions, by reviewing actual widths and buffers of sites in the metropolitan area, and by screening the results for reasonableness and acceptability.
